## Catalpa Ct. Drainage Improvements to Begin next week

In November 2008, PECA and homeowners on and around Catalpa Ct. met with Parish leaders, Drainage Director Kazam Alikhani and the Street Dept. Director Randy Nicholson. As you probably already know, Catalpa Ct. has collected excessive water for many years since the street was built on a downwards slope putting the flow of water running towards Catalpa. The Parish surveyed what improvements would best to address the issue and now ready to begin the work. Although the street slopes to Catalpa, the drainage underneath does slope properly to Oak Alley, so the solution is to add additional drains on the street to help get the water in the drains before it has a chance to flow to Catalpa. The work will begin next week. If you have questions, call or email me.

Thanks,
